## InsMark Compare

## Comparison of Insurance Policies

## Preface

In the accompanying pages is an analysis that compares costs and benefits of different life insurance policies.

There are three policies included in this analysis, allowing you to easily review how the plans differ in terms of premiums, loan proceeds, cash accumulation, death benefits, and internal rates of return.

A mathematical evaluation is not the only important item to study when purchasing life insurance. Others are:

1. The financial strength of the company;
2. Suitability of the type of plan;
3. Plan provisions and contractual guarantees;
4. Reputation of the agent or broker.

An analysis of these points, along with conclusions drawn from the accompanying reports, should be useful to you as part of the evaluation of your life insurance purchase. Below is a graphic summarizing the results of the accompanying presentation.

Comparison of Policy Values at year 55

 vary and be more or less favorable depending upon a number of factors. Please review all carrier illustrations and disclaimers in conjunction with this presentation

# Comparison of Insurance Policies 

## Risk Profile

In the accompanying pages is a financial analysis that compares costs and benefits of different types of life insurance policies, such as Whole Life, Universal Life, Indexed Universal Life, and Variable Universal Life.

Each life insurance policy type has specific pros and cons. A determination of which policy is the most suitable for you depends on where you fall on the scale below (with Whole Life typically being the most conservative and Variable Universal Life the most aggressive).
Accordingly, before making a final decision on which policy is best for you and your specific needs and circumstances, you need to understand variations
in premiums, policy cash flow, cash values, death benefits, and respective rates of return coupled with your personal risk tolerance.

Your financial adviser can help determine which policy is most suitable for you. The pages in this presentation should be useful to you in making your decision.

Which Life Insurance Policy Type is Best for You?

 vary and be more or less favorable depending upon a number of factors. Please review all carrier illustrations and disclaimers in conjunction with this presentation.

## Comparison of Insurance Policies

*This illustration assumes the nonguaranteed values continue in all years. This is not likely, and actual results may be more or less favorable. This illustration is not valid unless accompanied by a basic illustration from the issuing life insurance company.

## Various Financial Alternatives 1

## Preface

## A decision to acquire additional life insurance can represent one of several significant phases in your overall financial planning.

An important part of this decision involves the comparison of the life insurance policy to alternative investment possibilities.

To help you make an informed decision about acquiring the policy, the accompanying presentation shows financial data regarding life insurance compared to these alternatives:

Taxable Account;
Tax Deferred Account;
Equity Mutual Fund.
The study offers information from which you and your advisers can draw informed conclusions about the suitability of either plan.

Following are major features of the life insurance policy for you to consider as part of your overall assessment:

1. Income tax free death benefits;
2. Probate free death benefits;
3. Accumulating cash values;
4. Income tax deferred growth of cash values;
5. Competitive current interest rate;
6. Tax free access to cash values via policy loans;
7. Privacy of all transactions;
8. Advance of death benefits in certain adverse health circumstances -- as defined in the policy contract.

Favorable income tax consequences combine with significant policy values and benefits to produce a life insurance solution that has a considerable amount of financial leverage.

This graphic assumes the non-guaranteed values shown continue in all years. This is not likely, and actual results may be more or less favorable.

Income Tax Considerations

1. Taxable Account: Interest is taxed as earned.
2. Tax Deferred Account: Interest is tax deferred.
(Values assume tax is assessed in year shown only)
3. Equity Mutual Fund: Capital gains tax calculations are taxed based on a ratio of asset value to remaining cost basis in any given year.
4. Indexed Universal Life:
a. Death Benefit including cash value component is income tax free.
b. Loans are income tax free as long as the policy is kept in force.
c. Withdrawals and other non-loan policy cash flow up to cost basis (not in violation of IRC Section 7702) are income tax free as a return of premium.
d. Cash values shown assume most favorable combination of $b$ and/or $c$.

This illustration assumes the nonguaranteed values continue in all years. This is not likely, and actual results may be more or less favorable. This illustration is not valid unless accompanied by a basic illustration from the issuing life insurance company.

35 Year Analysis of Cumulative Plan Costs

## Plan Costs*

## Various Financial Alternatives

Cumulative After Tax Cash Flow

## After Tax Values

*The Comparison of Plan Costs graphic above compares the management fees and/or taxes of each investment alternative to the mortality charges, policy expenses, and income taxes (if applicable) associated with the life insurance policy.

## 55 Year Analysis of Cumulative Plan Costs

## Plan Costs*

## Various Financial Alternatives

Cumulative After Tax Cash Flow

## After Tax Values

*The Comparison of Plan Costs graphic above compares the management fees and/or taxes of each investment alternative to the mortality charges, policy expenses, and income taxes (if applicable) associated with the life insurance policy.

The tax deferred investment illustrated in the accompanying material reflects after tax values. Since withdrawals are taxable until any gain is exhausted, account values are illustrated on an after tax basis.

With equity accounts, dividends are taxed and the after tax balance is either reinvested or used for scheduled cash flow. Capital gains tax calculations are based upon a ratio of asset value to remaining cost basis in any given year.

A cash value life insurance policy (that is not designed as a modified endowment contract*) is taxed on a first-in-first-out basis which means that withdrawals (also known as partial surrenders) have different taxation. Withdrawals up to cost basis are income-tax free; subsequent withdrawals are taxable. However, the contractual loan provision in the policy allows you to access additional cash flow from the policy cash value which is income-tax free so long as the policy stays in force. This feature avoids the problem of taxable withdrawals in excess of cost basis. Interest on such loans can be added to the outstanding loan, and with most life insurance policies, the loan balance is credited with interest earnings at (or near) the level of the loan interest charged resulting in a wash (or near wash) of the loan interest.

Indexed universal life with participating loans has a different treatment. Interest on such loans adds to any outstanding loans, and all cash value earns interest established by the selected index. This feature causes compounding of the entire cash value (including that portion securing policy loans), so long as the index produces interest above the policy loan rate, which is usually $4.00 \%$ to $5.00 \%$.

With all cash value life insurance, if the policy remains in force until death, the policy death benefit is income-tax free, including any internal deferred gain. The foundation of this particular treatment is IRC Section 101. This statute provides that the proceeds of life insurance maturing as a death claim are exempt from federal income tax. This advantage applies to the full death benefit, including any cash value component, whether loans exist or not.

Policy loans reduce policy cash values and death benefits, and the lapse of a loaned policy could result in severe tax ramifications to the policy owner. Be sure to consult a professional tax adviser if you have any questions about this.
*With a life insurance policy that is characterized as a modified endowment contract ("MEC"), both withdrawals and loans are taxed on a gain first basis. In almost all circumstances, it is advisable to avoid purchasing a MEC, and the basic illustration that is provided to you from the issuing life insurance company should indicate if it is a MEC.

Legal and tax information is for general use only and may not be applicable to specific circumstances. Clients should consult their own legal, tax and accounting advisors to assist in the evaluation of any potential transaction or strategy.

## Permanent vs. Term

# Term Insurance and Equity Mutual Fund vs. Indexed Universal Life 

## Preface

## A decision to acquire additional life insurance can represent one of several significant phases in your overall financial planning.

An important part of this decision will involve your selection of the appropriate life insurance policy.

There are several important factors to consider which include:

1. The time frame for the insurance need;
2. Your available cash flow;
3. Your alternative uses for the cash flow;
4. The income tax considerations.

An integrated analysis of these points creates useful information that helps guide your purchasing evaluation. The precision of the conclusions, however, is contingent upon the accuracy of the data utilized. You should be positive that all premises and
conditions accurately reflect your goals and expectations.

The accompanying analysis contrasts a cash value policy to a term insurance alternative. Any difference in premiums between the two choices has been evaluated regarding time/use of money.
The study produces information which should form a basis from which you and your advisors can draw informed conclusions.

Based upon the results of the analysis, we recommend funding your life insurance requirement with the cash value policy illustrated rather than a term life insurance policy.

This graphic assumes the non-guaranteed values shown continue in all years. This is not likely, and actual results may be more or less favorable.

1. Equity Mutual Fund: Capital gains tax calculations are taxed based on a ratio of asset value to remaining cost basis in any given year.
2. Indexed Universal Life:
a. Death Benefit including available cash value component is income tax free.
b. Loans are income tax free as long as the policy is kept in force.
c. Withdrawals and other non-loan policy cash flow up to cost basis (not in violation of IRC Section 7702(A)) are income tax free as a return of premium.
d. Cash values shown assume most favorable combination of $b$ and/or c.

This illustration assumes the nonguaranteed values continue in all years. This is not likely, and actual results may be more or less favorable. This illustration is not valid unless accompanied by a basic illustration from the issuing life insurance company.

## Appendix \#1 for Blog \#199

## Taxation of Tax Deferred Account Cash Flow

With tax deferred accounts, withdrawals (partial surrenders) are taxable until gain is exhausted. Due to this, cash flow illustrated from the tax deferred account in this presentation is the after tax result of withdrawals of a higher amount.

With cash value life insurance policies, withdrawals (also known as partial surrenders) are income-tax free up to cost basis and taxable thereafter. Policy loans are income-tax free so long as the policy stays in force until death. The source of the cash flow from the life insurance policy in this presentation is policy loans.

Note: Policy loans reduce policy cash values and death benefits, and the lapse of a loaned policy could result in severe tax ramifications to the policy owner. Be sure to consult a professional tax adviser if you have any questions about this issue.

## Cash Flow Analysis In Year 21

Below is an analysis of tax calculations on cash flow in the first year that cash flow from the Tax Deferred Account and Indexed Universal Life is illustrated.

## Tax Deferred Account

|  | $\$ 158,730$ |
| ---: | ---: | ---: | ---: |
| + | gain in contract withdrawn @ $37.00 \%$ tax to net |
| additional non-taxed withdrawal to net |  |$+$| $\$ 100,000$ |
| ---: |
| + |

## Indexed Universal Life

There are no tax calculations required for the life insurance policy since policy loans are not taxable

## Various Financial Alternatives vs. Indexed Universal Life

## Taxation of Equity Mutual Fund Cash Flow

With equity accounts, dividends are taxed and the after tax balance is either reinvested or used for scheduled cash flow. Capital gains tax calculations are based upon a ratio of asset value to remaining cost basis in any given year.

With cash value life insurance policies, withdrawals (also known as partial surrenders) are income-tax free up to cost basis and taxable thereafter. Policy loans are income-tax free so long as the policy stays in force until death. The source of the cash flow from the life insurance policy in this presentation is policy loans.

Note: Policy loans reduce policy cash values and death benefits, and the lapse of a loaned policy could result in severe tax ramifications to the policy owner. Be sure to consult a professional tax adviser if you have any questions about this issue.

Tax Deferred Account values are not guaranteed and may be higher or lower than illustrated. charges or market rate adjustments, if any.

Tax Deferred Account is assessed:
Income tax each year. Column (5) values are after tax.
Withdrawals are taxable until gain is exhausted. Due to this, any withdrawals reflected in Column (2) have been grossed up so the after tax net is equal to the amount shown.

*The composite capital gains tax rate includes $40.00 \%$ short-term gains subject to ordinary income tax and $60.00 \%$ long-term gains subject to capital gains tax. The individual tax rates used to create the composite tax rate are:

Capital Gains Tax: 25.00\%
Income Tax: 37.00\%
${ }^{* *}$ Column (7) is reduced by a $0.50 \%$ management fee.
(To review turnover calculations, see the Portfolio Turnover Details report.)

Capital gains tax calculations are based upon a ratio of asset value to remaining cost basis in any given year.

## Taxation of Cash Flow

With equity accounts, dividends are taxed and the after tax balance is either reinvested or used for scheduled cash flow. Capital gains tax calculations are based upon a ratio of asset value to remaining cost basis in any given year.

With cash value life insurance policies, withdrawals (also known as partial surrenders) are income-tax free up to cost basis and taxable thereafter. Policy loans are income-tax free so long as the policy stays in force until death. The source of the cash flow from the life insurance policy in this presentation is policy loans.

Note: Policy loans reduce policy cash values and death benefits, and the lapse of a loaned policy could result in severe tax ramifications to the policy owner. Be sure to consult a professional tax adviser if you have any questions about this issue.

[^0]:    Initial
    Death Benefit
    586,790

[^1]:    Tax deferred account surrender charges, if any, will further reduce tax deferred account values.
